

A PLAN TO LOOK AT · NOTHING IS BUILT YET

CSR Shift Logger

A simple app where each CSR writes down what they do during their shift. The counts add up by themselves, and the CEO can watch the whole team live on a separate screen.

Tap, fill, done

Counts itself

Two apps that share one place

CSRs use one app to write down their work. The CEO uses a different app to watch. Both save to the same place online — so when a CSR adds something, the CEO sees it right away.

■ In plain words

- Nothing comes from old sheets or ClickUp. **What the CSRs type is the only source.**
- Two apps, two passwords. CSRs **can't open** the CEO app.
- Everything is **live** — new work shows up for the CEO straight away.

How a shift works, start to finish

Here is everything in order — from logging in to logging out. The counts add up by themselves.

Logging in

No usernames or passwords to remember. Just pick three things. The app fills in the time and date.

LOG-IN SCREEN

DATE & START TIME

13 Jun 2026 · 01:08

filled in

Start my shift

What you do

- Pick your **name**, your **shift**, and your **profile**. That's it.
- The app writes down your **start time** and **date** for you.
- Right after you log in, you'll see the **note the last person left** (next page).

Shift times (Pakistan)

- **Morning** — 9:00 am to 5:00 pm
- **Evening** — 5:00 pm to 1:00 am
- **Night** — 1:00 am to 9:00 am

Writing down what you did

Tap the “ + ” next to the thing you did. A small box pops up and asks only for what it needs. Fill it, press OK — saved.

Tap “ + ”

Old client

WHAT IT WAS ABOUT (AGENDA)

New logo, scope and timeline...

Cancel

OK

Why it's easy

- The box asks **only** what that thing needs — nothing extra.
- Press OK and your **count goes up by itself**.
- You stay on the same screen the whole time.

A few examples

- **Meeting** → client · type · **what it was about**
- **New inquiry** → username · **what they want**
- **Project given to a designer** → client · designer · **project** · **due date**

Your shift screen

This is your home for the whole shift. Your counts go up as you add things, and your list shows everything you logged.

Submit & clock out

It counts for you

- The numbers at the top **go up on their own** as you add things.
- You never type a total — the app does the maths.

Fixing a mistake

- Tap any line in your list to fix or update it.
- Fixing things **does not** change your finish time — only the Submit button does.

A note for the next person

Before you leave, write anything the next CSR should know. When they log in, your note pops up — and they tap “Noted” so you know they read it.

● YOU WRITE IT (BEFORE YOU LEAVE)

Notes for next shift

ANYTHING THE NEXT CSR SHOULD KNOW

Client “BALONCE” is waiting on a revision — please send first thing. Aurelius meeting moved to 4pm.

Save note

● THEY SEE IT (WHEN THEY LOG IN)

Note from Saad (last shift)

Client “BALONCE” is waiting on a revision — please send first thing. Aurelius meeting moved to 4pm.

Noted ✓

● How it works

- It's just a **plain text box** — write whatever you want.
- The next CSR on that profile sees it **the moment they log in**.
- They tap **“Noted”**, so you can be sure they read it.

● Why it helps

- No more “did the night shift tell us about...?”
- Nothing falls through the cracks between shifts.

Clocking out

One button ends your shift and writes your finish time. This is the only thing that sets it — so your hours stay correct even if you fixed things along the way.

■ The simple rule

- **Submit = clock out.** Nothing else writes your finish time.
- Going back to fix a line **does not** change your finish time.
- Once you submit, the shift is final and rolls into the CEO's totals.

Everything you can write down

Every kind of work you report today, each as its own button. They're grouped to keep the screen tidy. **Violet** words are the things the box asks for.

A few numbers & a checklist

Some things aren't a single action — you fill them once before you clock out. These come straight from your reports today.

NUMBERS (TYPE ONCE)

0

IMPRESSIONS

0

CLICKS

Why these are different

- They're totals for the whole shift, not single actions.
- Leave them blank if your profile doesn't track them.

Checked orders one by one

See past shifts

Anyone on the team can open the log and read what other CSRs did before, and their counts. You can read it, but you can't change someone else's report.

Tap a row to read the full report

READ ONLY

What it's for

- Catch up on what the shift before you did.
- See any CSR's past reports and their counts — it's **open to the whole team**.

Read only

- You can **open and read** any past report.
- You **can't edit** someone else's report — only your own, and only on the day.

A separate screen, just for the CEO

A different app with its own password. The CEO sees every CSR's counts going up live. CSRs can't open this one.

Kept separate

- It's a **different web link** with its **own password**.
- The link isn't shown anywhere in the CSR app.
- CSRs simply **don't have the password** for it.

What the CEO sees

- Live totals and a row for each CSR.
- Filter by **shift, profile or date**.
- Numbers move the **instant** a CSR saves something.

What we save & how it's built

The only technical page. Two simple tables, one live database. Everything else above is built on top of this.

SHIFT (one per CSR per shift)		
id key		uuid
csr_name		text
shift		text
profile		text
date		date
start_time		time
finish_time		time
impressions / clicks		int
checklist		json
note_for_next		text
note_seen_by/at		text/ts

ACTION (one per thing logged)		
id key		uuid
shift_id link		uuid
type		text
client		text
details		json
created_at		ts
updated_at		ts

What's saved

- One **shift** row (who · when · note for next · the numbers).
- One **action** row for each thing logged; its fields sit in details.
- Counts are worked out from the action rows — never typed.

How it's built

- **React + Vite** on Vercel — two small apps (CSR, CEO).
- **Supabase** database with live updates.
- CSRs can add/read; only the CEO app reads the live team totals.
