

A PLAN TO LOOK AT · NOTHING IS BUILT YET

CSR Shift Logger

A simple app where each CSR writes down what they do during their shift. The counts add up by themselves, and the CEO can watch the whole team live on a separate, password-locked screen.

Tap, fill, done

Two apps that share one place

CSRs use one app to write down their work. The CEO uses a different, locked app to watch. Both save to the same place online — so when a CSR adds something, the CEO sees it right away.

■ In plain words

- Nothing comes from old sheets or ClickUp. **What the CSRs type is the only source.**
- Two apps, two passwords. CSRs **can't open** the CEO app.
- Everything is **live** — new work shows up for the CEO straight away.

How a shift works, start to finish

Here is everything in order — from logging in to logging out. The counts add up by themselves.

Logging in

No usernames or passwords to remember. Just pick three things. The app fills in the time and date.

LOG-IN SCREEN

filled in

Start my shift

What you do

- Pick your **name**, **shift**, and **profile** from the list (next page).
- The app writes your **start time** and **date** for you.
- Right after, you'll see the **note left for your profile** (page 8).

Shift times (Pakistan)

- **Morning** — 9:00 am to 5:00 pm
- **Evening** — 5:00 pm to 1:00 am
- **Night** — 1:00 am to 9:00 am

Who's in the list

These names fill the “Your name” drop-down. Each CSR has one fixed profile, so picking your name can set your profile automatically.

Morning9am-5pm	Evening5pm-1am	Night1am-9am
Tanzeel	Tayyab	Salman
Iqra	Hasnain Gillani	Saad
Hassan	Ali Shakeel	Shahzaib
Hira	Abdul Basit	Swaid
Misbah	Hadi	Samama
Gulba	Aneeq	Ahmad
Amrah	Faiz	Nadir

● Fixed profiles

- Each CSR works **one fixed profile** — so the name → profile is set once.
- That's why a hand-off note goes **to the next CSR on that profile**, not just anyone.
- The list is easy to update when people join or leave.

Writing down what you did

Tap the “ + ” next to the thing you did. A small box pops up and asks only for what it needs. Fill it, press OK — saved.

Tap “ + ”

Old client

WHAT IT WAS ABOUT (AGENDA)

New logo, scope and timeline...

Cancel

OK

Why it's easy

- The box asks **only** what that thing needs — nothing extra.
- Press OK and your **count goes up by itself**.
- You stay on the same screen the whole time.

A few examples

- **Meeting** → client · type · **what it was about**
- **New inquiry** → username · **what they want**
- **Project given to a designer** → client · designer · **project** · **due date**

Your shift screen

This is your home for the whole shift. Your counts go up as you add things, and your list shows everything you logged.

Submit & clock out

It counts for you

- The numbers at the top **go up on their own** as you add things.
- You never type a total — the app does the maths.

Fixing a mistake

- Tap any line to fix or update it — **but only before you submit.**
- Once you submit, the shift is **locked**. No more edits.

A note for the next person on your profile

Before you leave, write anything the next CSR on **your profile** should know. When they log in, your note pops up — and they tap “Noted” so you know they read it.

● YOU WRITE IT (BEFORE YOU LEAVE)

● ● ● Note for next shift · Grid

ANYTHING THE NEXT CSR ON GRID SHOULD KNOW

Client “BALONCE” is waiting on a revision — please send first thing. Aurelius meeting moved to 4pm.

Save note

● THEY SEE IT (WHEN THEY LOG IN)

✉ Note for Grid · from Saad

Client “BALONCE” is waiting on a revision — please send first thing. Aurelius meeting moved to 4pm.

Noted ✓

● It follows the profile

- Many CSRs work the same shift, each on a **different profile**.
- So the note goes to the **next CSR on that profile** — e.g. a Grid note waits for the next Grid CSR.
- They tap “**Noted**”, so you can be sure it was read.

● Why it helps

- No more “did the last shift tell us about...?”
- Nothing falls through the cracks between shifts.

Clocking out

One button ends your shift. It writes your finish time and locks the shift — after this, no more edits at all.

■ The simple rule

- **Submit = clock out + lock.** Nothing else sets your finish time.
- After you submit, **you can't change anything** in that shift.
- Need a fix after submitting? A manager handles it — keeps the records honest.

Everything you can write down

Every kind of work you report today, each as its own button, grouped to keep the screen tidy. **Violet** words are what the box asks for. More can be added as you share examples.

A few numbers & a checklist

Some things aren't a single action — you fill them once before you clock out. These come straight from your reports today.

NUMBERS (TYPE ONCE)

0

IMPRESSIONS

0

CLICKS

Why these are different

- They're totals for the whole shift, not single actions.
- Leave them blank if your profile doesn't track them.

Tap a row to read the full report

READ ONLY

What it's for

- Catch up on what the shift before you did.
- See any CSR's past reports and counts — **open to the whole team** (nothing to hide).

Read only

- You can **open and read** any past report.
- **No report can be edited after it's submitted** — yours or anyone's.

A separate screen, locked by password

A different app, behind its own password. CSRs don't have it and can't open it. Inside, the CEO sees every CSR's counts going up live.

● IT OPENS WITH A PASSWORD

The login interface for the CEO screen. It features a dark blue header with a yellow padlock icon and the text "CEO screen" and "Managers only". Below the header is a white section with the label "PASSWORD" and a password input field with ten dots. A blue "Open" button is at the bottom.

The live view interface for the CEO screen. It has a title bar "CEO screen · live" with three colored dots (red, yellow, green). Below the title bar are three tabs: "All shifts" (selected), "Night", and "All profiles". The main content area shows two rows of data:

● Saad · Grid	Inq 3	Rev 4
● Nadir · Eikon	Inq 2	Rev 5

● Locked away from CSRs

- It's a **different web link** with its **own password**.
- The link is never shown in the CSR app.
- CSRs simply **don't have the password** — they can't get in.

● What the CEO sees

- Live totals and a row for each CSR.
- Filter by **shift, profile or date**.
- Numbers move the **instant** a CSR saves something.

What we save & how it's built

The only technical page. Two simple tables, one live database. Everything else above is built on top of this.

What's saved

- One **shift** row (who · when · note for next · the numbers · status).
- One **action** row per thing logged; fields sit in details.
- When status = **submitted**, the app blocks any further edits.

How it's built

- React + Vite** on Vercel — two apps (CSR, CEO).
- Supabase** database with live updates; CEO app behind its own password.
- Hand-off note is the latest unread note where profile = yours.
